

Davis High School

Davis High School
Kaysville, Utah
340,000 Square Feet
Completed in August 2004

This high school was designed to better suit education with larger classrooms, more open spaces, and wider hallways. The design included unique and cost effective solutions to complex problems including: a masonry reveal in tall, load bearing walls, a hipped roof structure over the gymnasium, a wing wall that extended out of the building, and a curved roof over the commons area. Extensive coordination between all of the design professionals was instrumental in completing this project on schedule. Since its completion, the building has become a land-mark building that will serve the needs of the Davis County School District for years to come.
