

Plain City Elementary

Plain City Elementary
Plain City, Utah
84,550 Square Feet
Completed in August 2007

2007 UMC Excellence in Masonry Design Winner

*Excellence
in Masonry
Design Awards*

The building design and lay-out for this school is unique and very functional, and is so well liked by the school teachers and administrators that it has now been built three times in the Weber School District (Freedom Elementary and West Haven Elementary were built previously and are the other two buildings that match this same design). Masonry has been an integral part of the structure since conception and has supported the design goals and intent very well.

Plain City Elementary stands as an example of both aesthetic form and natural function. The robust masonry walls that adorn the entire exterior surface of the building are very inviting and give the building a feeling of solidarity, commitment, longevity, and security to the students that will come to receive an education.
