

## Weber State University Wildcat Center for Health, Wellness and Education

**Weber State University Wildcat Center for Health, Wellness and Education**  
**Ogden, Utah**  
**30,900 Square Feet**  
**Completed in 2013**

The Wildcat Center is an addition to the Stromberg Athletic Complex on the Ogden campus of Weber State University. The completed building now contains a three lane running track, hung 21 feet above the ground using the existing roof structure. A pedestrian bridge was added that crosses the arena, below the track, to connect the new addition on one side to the existing Swenson building on the other side. The bridge was designed to stand alone and to provide as much of its own generated lateral force resistance as possible. A series of cantilevered steel columns were designed to support both the gravity load of the bridge as well as the seismically induced lateral loads.
